

PHARMACEUTICAL COMPLAINT REPORT

Document ID: CMP-2024-0203 | Date Issued: 05 September 2024 | Classification: CONFIDENTIAL

1. Complaint Source & Customer Information

Complaint Source	PharmaCare Distribution Pvt. Ltd.
Customer Name	PharmaCare Distribution — Delhi Warehouse
Customer Address	Plot 22, Logistics Park, NH-8, Gurugram – 122001
Contact Person	Mr. Arjun Singh, Quality Manager
Contact Email	quality@pharmacaredist.com
Complaint Date	03 September 2024

2. Product & Batch Identification

Product Name	Paracetamol Oral Suspension
Product Strength	125 mg / 5 mL
Dosage Form	Oral Suspension — Paediatric
Batch / Lot Number	PRS240801
Manufacturing Date	10 August 2024
Expiry Date	09 August 2026
Container Type	60 mL Amber Glass Bottle with Child-Resistant Cap
Quantity Affected	36 bottles (3 shipper cartons × 12 bottles)

3. Complaint Description

Upon arrival of the shipment, the warehouse team found **36 bottles** of Paracetamol Oral Suspension with significant **leakage**. The product had leaked through the child-resistant cap and saturated the inner carton packaging.

Investigation at the warehouse revealed:

- The child-resistant caps were improperly torqued — they could be removed without the push-and-turn mechanism engaging.
- Inner cartons showed liquid staining consistent with the product colour (pink).
- Three outer shipping cartons had visible moisture damage.
- Bottles from the remaining 9 cartons in the same shipment appear intact.

Transport route: Manufacturer (Baddi, HP) → Delhi Warehouse via road freight. Transit time: 18 hours. No temperature excursion detected (cold chain logger intact). Damage appears to be due to **cap sealing failure**, not transport mishandling.

4. Initial Assessment

Complaint Type	Packaging — Cap Sealing Failure / Leakage
Severity (Initial)	Major
Priority	High
Patient Impact	Product loss; potential contamination if consumed
Regulatory Flag	Yes — container closure integrity concern
Suggested Action	QA investigation + packaging line review

5. Additional Information

- 36 affected bottles quarantined at distributor warehouse.
- Photographs and video documentation submitted with this complaint.
- Representative sample (6 leaking bottles) retained for analysis.
- Distributor requests full replacement of affected units plus investigation report.
- No patient exposure reported — leakage detected pre-distribution.

This document is auto-generated for AIVOA QMS testing. All patient and batch data is fictional.
